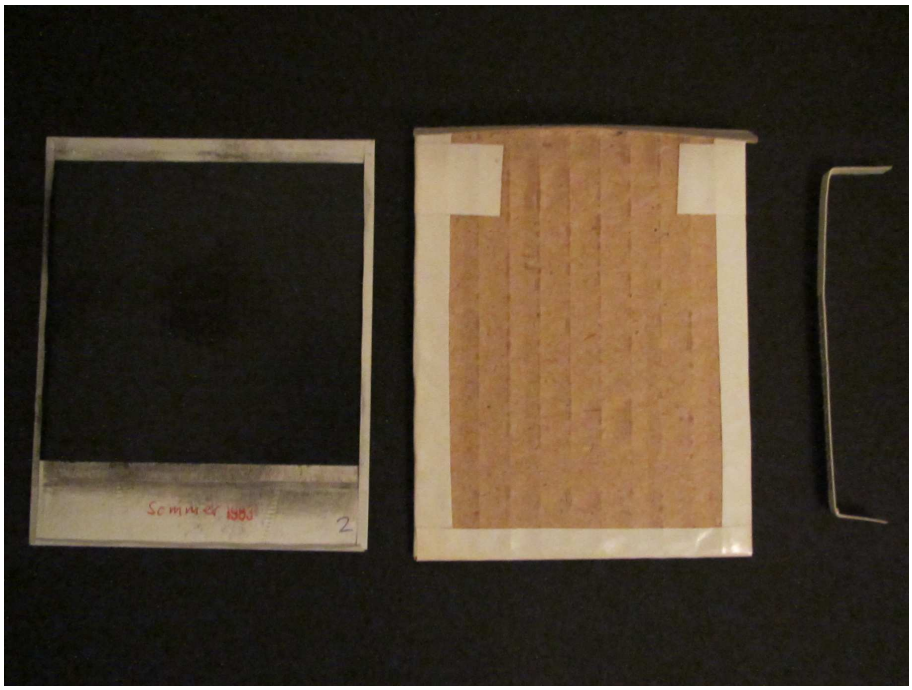
Experimental instructions how to use a single SX-70 film sheet instead of a Colorpack 82:

The necessary utensils:

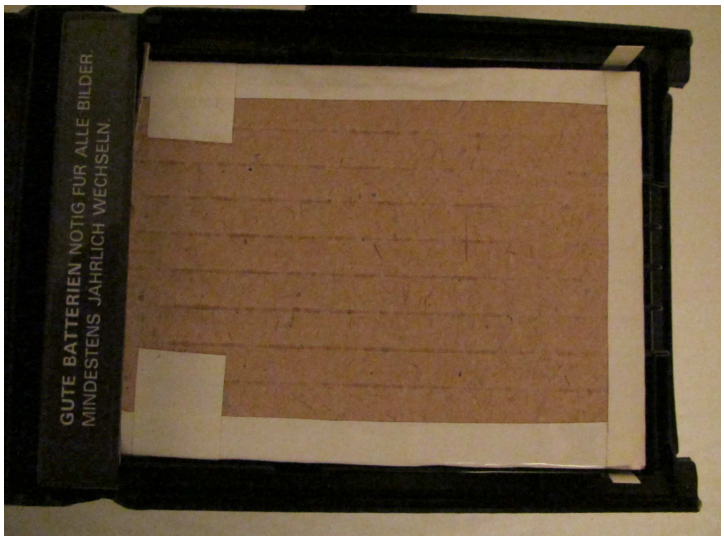


Open the camera:

Insert the narrow strip of paper that is used to pull out the single film sheet easier after exposure:

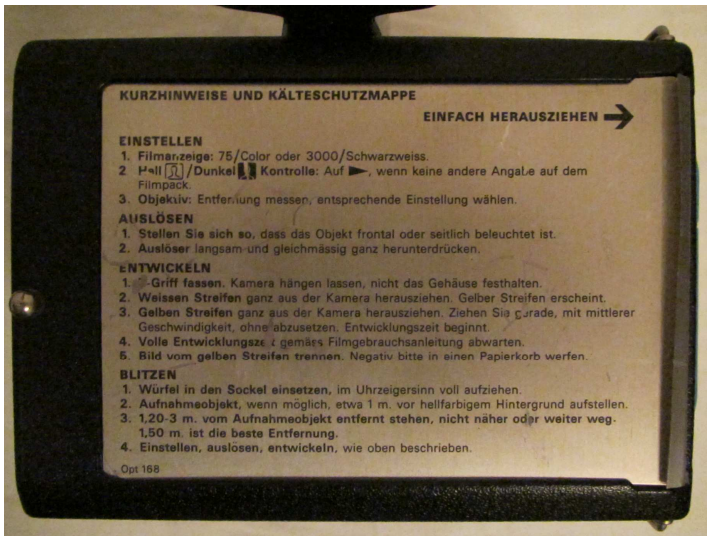
All following steps must be done in absolutely darkness !
Insert a single film sheet:

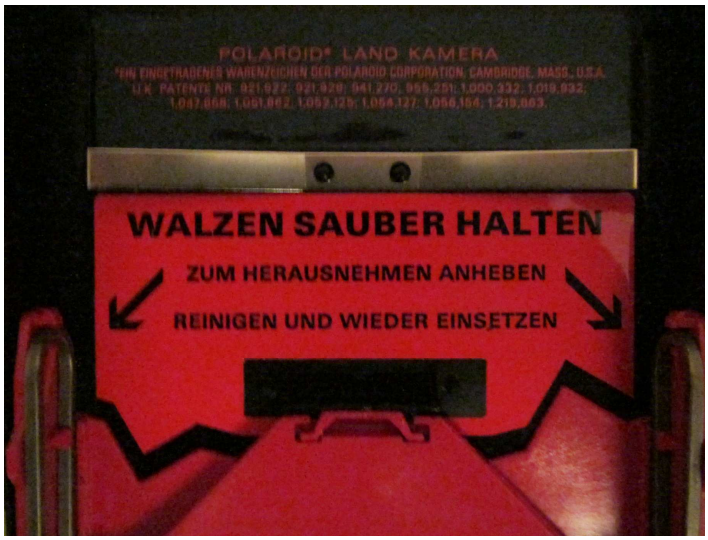
Finally insert the thicker piece of cardboard, which holds the film sheet flat:



Close the the camera ! After pressing the shutter to take a photo, remove the film sheet and put it into an empty cartridge. Insert the cartridge into an SX-70 camera and the mechanism will eject the developed photo immediately.

Special feature: This camera is labeled with instructions in German language:





I myself have not tested my homemade device !
